

Every face accounted for

AI-powered Facial Recognition

Accurate, Fast, Private

An advanced facial recognition system powered by AI. Instead of simple image matching, the system creates a unique digital facial signature in real time, continuously learning and improving - while strictly preserving user privacy.

Key Features

Recognition under extreme conditions

Operate in large crowds

Liveness detection

Leverages existing video infrastructure

**Privacy by Design
No image storage**

Real-time anomaly detection

System Applications

Staff & vendors access management

Sensitive facility security

Open-spaces facial recognition

Remote identity verification for IT systems
